## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.  
PCT/SG 99/00142**V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement		
Novelty (N)	Claims 1-99	YES
	Claims	NO
Inventive step (IS)	Claims 1-99	YES
	Claims	NO
Industrial applicability (IA)	Claims 1-99	YES
	Claims	NO
Citations and explanations (Rule 70.7)		

The following documents have been cited in the Search Report:

D1: GB2329812A  
D2: US4780709A

D1 represents the prior art coming closest to the subject-matter of the independent claims 1, 24, 47, 70, 80 and 90 of the present application and relates to a configurable user interface (GUI) to audio/video (A/V) data. A data descriptor engine is coupled to the A/V file system containing the A/V data. A type of user interfacing to the GUI is identified. A display generator accesses the A/V file system and generates a display of the A/V data dependent upon the type of user. A menu constructor generates user selectable options/features to be displayed in the GUI, the options/features displayed dependent upon the type of user. A manipulation engine receives user input and determines operations to be performed, the determination based upon the type of user.

However, neither a descriptor initiator where at least one value for a corresponding video segment is ascribed to a created descriptor, nor a video constructor for assembling an output video construction from at least two video segments according to said values of said descriptors are disclosed in D1.

D2 discloses only a display and no editing management system utilizing a display processor which employs a plurality of pointers and descriptors to allow data to be read from window buffers directly onto a visual display without first compiling a bit map frame buffer. The screen is divided into a plurality of horizontal strips which may be a single pixel in width. Each horizontal strip is divided into one or more rectangular tiles. These tiles and horizontal strips are combined to form viewing windows. The individual strips are defined by descriptors in a memory. The descriptors are updated only when the viewing windows on the display are changed. During generation of the display, the

**Continuation of: Box V (page 1)**

display processor reads the descriptors and fetches and displays the data in each tile without the need to store it intermediately in bit map form.

Again, neither a descriptor initiator where at least one value for a corresponding video segment is ascribed to a created descriptor, nor a video constructor for assembling an output video construction from at least two video segments according to said values of said descriptors are disclosed in D2.

The remaining claims 2 to 23, 25 to 46, 48 to 69, 71 to 79, 81 to 89, and 91 to 99 of the present application specify preferred embodiments of the subject-matter of the independent claims 1, 24, 47, 70, 80 and 90 of the present application.

Summarizing, all of the above cited documents merely define the state of the art. Therefore, the subject-matter of claims 1 to 99 can be considered novel and involving an inventive step. The industrial applicability is given, too.
